Note: The present sequence is not given in the specification but is derived from the Bacillus anthracis wild-type PA protein sequence shown in figure 13 (AAMS1483)

The invention relates to antibacterial agents comprising mutant forms of poer-forming toxins (AAMS12113 and AAMS1484AAM1500), especially mitants in the B moiety of the pore-forming binary A-B anthrax toxin, where the B moiety is anthrax protective antigen (PA) and using these mutants or compositions of them for protecting against Bacillus anthracis infections in humans, especially as vaccines. The present sequence is that of the anthrax PA protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               QSAIWSGFIKVKKSDEYTFATSADNHVTMWVDDQEVINKASNSNKIRLEKGRLYQIKIQY 120

                                                                                                                                                                                                                                                                                                                                                                 The sequence encoding the protective antigen of Bacillus anthracis may be used in the construction of a nucleic acid which encodes a fusion protein comprising the anthrax protective antigen binding domain of the native anthrax lethal factor and a sequence encoding an activity inducing domain of a second protein. The fusion proteins are useful for the specific killing of tumour cells or the killing of cells infected with correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            360

The invention relates to antibacterial agents comprising mutant forms of pore-forming toxins (AAMS213 and AAMS120), especially mutants in the B moiety of the pore-forming binary A-B anthrax toxin, where the B moiety is anthrax protective antigen (PA) and using these mutants or compositions of them for protecting against Bacillus anthracis infections in humans, especially as vaccines. Note: The present sequence is not given in the specification but is derived from the Bacillus anthracis wild-type PA protein sequence shown in figure 13 (AAMS1483)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to antibacterial agents comprising mutant forms of pore-forming toxins (AAMS2113 and AAMS1464-AAMS150), especially mutants in the B moiety of the pore-forming binary A-B anthrax toxin, where the B moiety is anthrax protective antigen (PA) and using these mutants or compositions of them for protecting against Bacillus anthracis infections in humans, especially as vaccines. Note: The present sequence is not given in the specification but is derived from the Bacillus anthracis wild-type PA protein sequence shown in figure 13 (AAMS1483)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     QSAIWSGFIKVKKSDEYTFATSADNHVTMWVDDQEVINKASNSNKIRLEKGRLYQIKIQY 120

The invention provides a recombinant DNA construct that comprises a vector and at least one nucleic acid (or its fragment) encoding a combination of Bacillus anthracis proteins, selected from protective antigen (PA), MAT-PA (PA with its secretory signals replaced from protective activator) and PA63 (63 KDa PA). The construct is useful as a DNA vaccine for anthrax and in producing infectious alpha virus particles. These particles, expressing the B. anthracis proteins are useful also as vaccines for anthrax. Host cells transformed with the construct are useful for analyzing the effectiveness of drugs and agents that inhibit anthrax or B. anthracis proteins. The present sequence represents a B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    OSAIWSGFIKVKKSDEYTFATSADNHVTMWVDDQEVINKASNSNKIRLEKGRLYQIKIQY 148

                                                                                        à
                                                                                                                                                                                                                                                        The invention provides a recombinant DNA construct that comprises a vector and at least one nucleic acid (or its fragment) encoding a combination of Bacillue anthracis proteins, selected from protective antigen (PA). MAY-PA (PA with its secretory signals replaced with those of tissue plasminogen with its secretory signals replaced with those of tissue plasminogen activator) and PAS3 (63 MDa PA). The construct is useful as a DNA vaccine for anthrax and in producing infectious alpha virus particles. These particles, expressing the B. anthracis proteins are useful also as vaccines for anthrax. Host cells transformed with the construct are useful for analyzing the effectiveness of drugs and agents that inhibit anthracis MAT-PA proteins. The present sequence represents a B. anthracis proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              421

721

629 420 480 509 540 569 600 099 689 720 749 300 329 SEVHGNAEVHASFFDIGGSVSAGFSNSNSSTVAIDHSLSLAGERTWAETWGLNTADTARL 360 The invention provides a recombinant DNA construct that comprises a vector and at least one nucleic acid (or its fragment) encoding a combination of Bacillus anthracis proteins, selected from protective antigen (PA), MAT-PA (PA with its secretory signals replaced with those of tissue plasminogen with its secretory signals replaced with those of tissue plasminogen activator) and PAS (63 MDa PA). The construct is useful as a DNA vaccine for anthrax and in producing infectious alpha virus particles. These particles, expressing the B. anthracis proteins are useful also as weachnee for anthrax. Host cells transformed with the construct are useful for analyzing the effectiveness of drugs and agents that inhibit anthrax. Pure analyzing the effectiveness of drugs and agents that inhibit anthrax. 120 149 180 240 269 209 **8**0 OYQGKDITEFDENFDQQTSQNIKNQLABLNATNIYTVLDKIKLNAKONILIRDKRRFHYDR LNAQKDFSSTPITMNYNQFLELEKTKQLRLDTDQVYGNIATYNFENGRVRVDTGSNWSEV LNAQDDFSSTPITWNYNQFLELEKTKQLKLDTDQVYGNIATYNFENGRVRVDTGSNWSEV LPQIQETTARIIFNGKDLNLVERRIAAVNPSDPLETTKPDMTLKEALKIAFGFNEPNGNL 510 LPQIQETTARIIFNGKDLNLVERRIAAVNPSDPLETTKPDMTLKEALKIAFGFNEPNGNL QYQGKDITEFDFNFDQQTSQNIKNQLABLNATNIYTVLDKIKLNAKMNILIRDKRFHYDR NNIAVGADESVVKEAHREVINSSTEGLLLNIDKDIRKILSGYIVEIEDTEGLKEVINDRY DMINISSIRODGKTFIDFKKYNDKLPLYISNPNYKVNVYAVTKENTIINPSENGDISTNG QSAIWSGFIKVKKSDEYTFATSADNHVTWWVDDQEVINKASNSNKIRLEKGRLYQIKIQY NANIRYVNTGTAPIYNVLPTTSLVLGKNQTLATIKAKBNQLSQILAPNNYYPSKNLAPIA ORENPTEKGLDFKLYWTDSQNKKEVISSDNLQLPELKQKSSNSRKKRSTSAGPTVPDRDN DGIPDSLEVEGYTVDVXNKRTFLSPWISNIHEKKGLTKYKSSPEKWSTASDPYSDFEKVT 1 EVKQENRLLINESESSSOGLLGYYFSDLNFQAPMVVTSSTTGDLSIPSSELENIPSENQYF cells for analyzing the drugs and agents inhibiting anthrax ö Length 764; Indels Query Match

This sequence shows the B. anthracis protective antigen (PA). An immunogenic fragment of PA, pCPA, can be used to produce an immune response which protects an animal against lethal injection with Bacillus anthracis. DNA encoding the B. anthracis PA can be used in conjunction with DNA encoding the B. anthracis PA can be used in conjunction with DNA encoding the mutated LF protein or fragment alone or in combination with a DNA encoding the PA protein or its fragment, both components (humoral and cell-mediated) of the immune system are stimulated, which results in longer term immune memory response. The combined use of a mutated LF and PA gene or their fragments results in a higher level of immune response, as judged by overall serum antibody titers for LF and PA antigens, than the use of either LF or PA genes in separate immunizations

The present invention relates to an immunogenic reagent, which produces an immune response that is protective against Bacillus anthracis. The reagent comprises one or more polypeptides which together represent up to three domains of the full length Protective Antigen (PA) of Bacillus anthracis or variants of these, and at least one of the domains comprises domain or domain 4 of PA or its variant. The invention is used as a vaccine. The immunogenic reagent is useful in the preparation of a medicament for the prophylaxis or treatment of B. anthracis infection. The present sequence is Bacillus subtilis protective antigen domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120

The invention relates to a conjugate comprising an injected bacterial effector protein and a carrier that targets the effector protein to a carge cell. Pharmacutical composition of the invention is useful for a create cell. Pharmacutical composition of the invention is useful for a treatment selected from promocing or inhibiting survival of cells, promocing or inhibiting the growth of cells, apoptosis, release of an inflammatory complicator from cells, division of cells and treating intracellular complicator from cells, division of cells and treating intracellular cell useful in the manufacture of a medicament for treating a neuronal cell, for intracellular infection, for interfering with intracellular cell, for intracellular cell. The invention is also useful for inhibiting secretion from cells. The invention is also useful for treating Prion disease, Alzhaner disease and wide range of disorders including muscle spasms such as blephorospasm, torticols and disease (CODP), bronchitis and ashman. The present sequence is Bacillus anthracis continuantion of the invention ô 509 540 360 SEVHÇINAEVHASPFDIGGSVSAGFSNSNSSTVAIDHSLSLAGERTWAETMGINTADTARL 389 420 449 480 569 120 149 180 209 240 269 300 329 Conjugate for modulating cell survival and cell growth, modulating release of inflammatory mediator from cells, comprises injected bacterial effector protein and a carrier that targets the protein to target cell. 9 89 LNAQKDFSSTPITMNYNQFLELEKTKQLRLDTDQVYGNIATYNFENGRVRVDTGSNWSEV LPQIQETTARIIFNGKDINLVERRIAAVNPSDPLETTKPDMTLKEALKIAFGFNEPNGNL QRENPTEKGLDFKLYWTDSQNKKEVISSDNLQLPELKQKSSNSRKKRSTSAGPTVPDRDN DGI PDSLEVEGYTVDVKAKRTFLSPWI SNIHEKKGLTKYKSSPEKWSTASDPYSDFEKVT SEVHGNAEVHASFFDIGGSVSAGFSNSNSSTVAIDHSLSLAGERTWAETMGLNTADTARL EVKQENRLINESESSSQGLLGYYFSDLNFQAPMVVTSSTTGDLSIPSSELENIPSENQYF EVKQENRLINESESSSQGLIGYYFSDLNFQAPWVVTSSTTGDLSIPSSELENIPSENQYF QSAIWSGFIKVKKSDEYTFATSADNHVTWWVDDQEVINKASNSNKIRLEKGRLYQIKIQY ORENPTEKGLDFKLYWTDSQNKKEVISSDNLQLPELKQKSSNSRKKRSTSAGPTVPDRDN DGI PDSLEVEGYTVDVKAKRTFLSPMI SNIHEKKGLTKYKSSPEKWSTASDPYSDPEKVT GRIDKNVSPEARHPLVAAYPIVHVDMENIILSKNEDQSTQNTDSETRTISKNTSTSRTHT NANI RYVNTGTAPI YNVLPTTSLVLGKNOTLATI KAKENOLSOILAPNNYYPSKNLAPIA Gaps ö Length 764; Indels Score 3764; DB 6; Pred. The invention relates to antibacterial agents comprising mutant forms of pore-forming toxins (AAMS2113 and AAMS1484-AAMS1500), especially mutants in the B moiety of the pore-forming binary A-B anthrax toxin, where the B moiety is anthrax protective antigen (FA) and using these mutants or compositions of them for protecting against Bacillus anthracis infections in humans, especially as vaccines. Note: The present sequence is not given in the specification but is derived from the Bacillus anthracis wild-type PA protein sequence shown in figure 13 (AAMS1483)
